

# THE BELT RAILWAY COMPANY OF CHICAGO

## TRAIN DISPATCHER NOTICE

### #2021-010

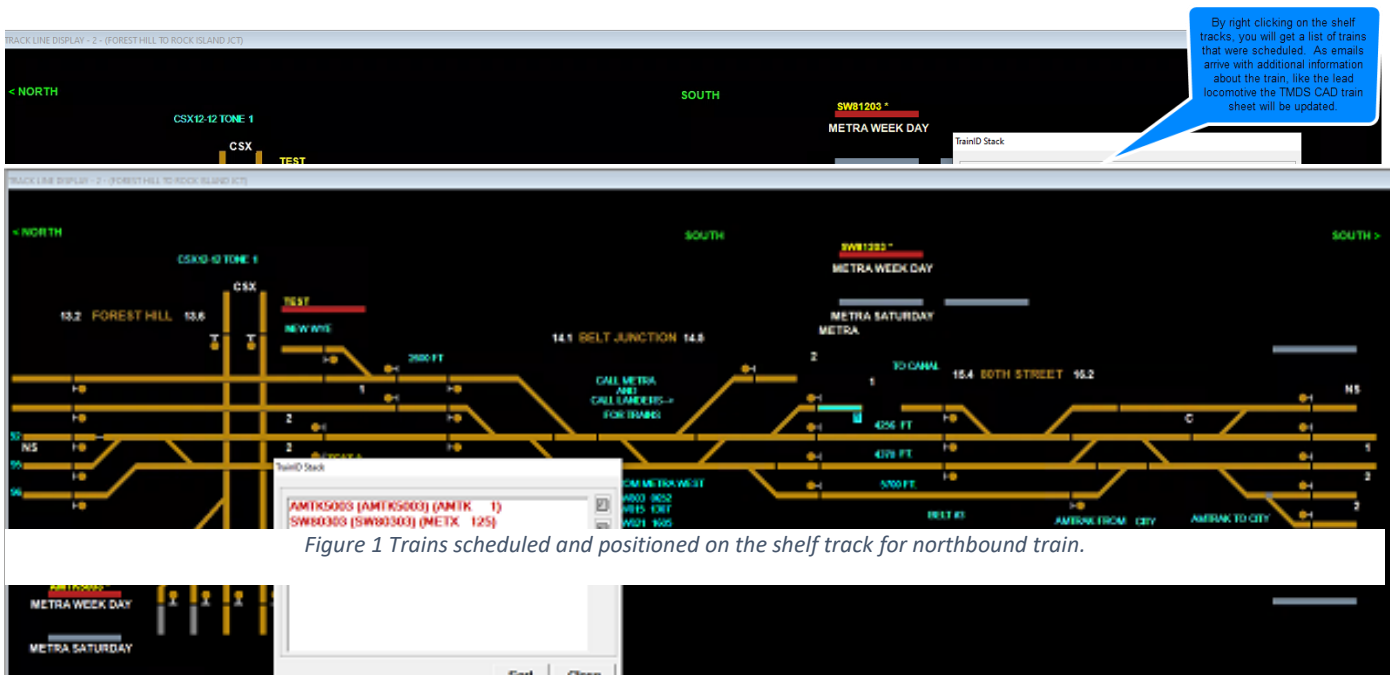

Effective 0001, July 13, 2021

**To: Train Dispatchers, Clearing**

**Subject: Passenger Train Symbols**

On Sunday, June 11<sup>th</sup>, 2021, at 1201, the Supplemental Train Sheet Manager (STSM) will be updated to add DOB assignment to all trains except for those Amtrak and passenger trains that are on shelf tracks at Lemoyne.

First some clarifications for the Supplemental Train Sheet Manager (STSM) software application that provides for the automatic creation of train sheets for Metra and Amtrak passenger trains to support the daily pre-placement of train sheets into the CAD database. Note that all passenger trains at Belt Junction and Lemoyne now run with a specific date. If an email is received through Clearpath, the initial train symbol will with the controlling locomotive identifier from either AMTK 1 or METX 1 dependent on the SCAC for the railroad in the train schedule. The train crew will default for the Engineer to XX ENGINEER and for the conductor XX CONDUCTOR. When an email is received all that has been set to defaults will be updated will be updated.

In Figure 2 an example of a Train ID that has not been updated due to a missing email or an AMTRAK train that do not receive emails.

The screenshot shows a track layout on the left with labels like 'E HOLE', 'W HOLE', 'AMTK', 'METRA', 'FRT', 'HOME PRODUCTS', and 'SOUTH'. On the right is a 'TRAIN ID' configuration form. The form has tabs for 'Train', 'Crew', 'Composition', 'OS Times', 'Comments', 'Delays', and 'Events'. The 'TRAIN ID' tab is active, showing fields for SYMBOL (A30609), ENGINE ID (AMTK 1), DIRECTION (NORTH), and PSEUDO. Below these are 'OTHER INFO' fields: MAX SPD (0), HPT (00.0), TPOB (0), TOTAL HP (0), RSSM, HIGH-WIDE, KEY TRAIN, HELPER TRAIN, and PULLER. There are also checkboxes for 'SEND VIEW TRAIN TO' and 'SEND AS VIEW TRAIN'. At the bottom are 'OK', 'Cancel', and 'Print' buttons.

Figure 3 Lemoyne Shelf track will have positioned train symbols and will not receive a DOB assignment, nor will the train consist, locomotive consist, nor crew will be updated.

This application also has the feature to interact with the CAD system and auto position the scheduled passenger trains onto specific tracks designated in the train schedule file as seen in Figures 1, 2 and 3.

Dispatchers can still right click on any train in the train list on the shelf track window and modify any data that is necessary. The only train type for Metra and Amtrak to can be used is Passenger. If any train freight or passenger train has its train sheet opened, if you don't provide a train type the train type will default to the Train Type "OTHER". Train Type "OTHER" is used for any train that the Dispatcher does not want to archive. You will see freight trains that have the Train Type "OTHER" remain in the train sheet.

If scheduled Metra or Amtrak trains are not on a shelf track, you can verify that the train symbol is created in the System Summary for System Train. See Figure 4 for an example of either released trains like SW82409 since the "LINE" field has "BELT RAILWAY" with all others train symbols that were created but have not been positioned. You can POSITION the train symbol that is in the System Summary for System Train by right clicking on the track where you want to position the train symbol, see Figure 5. Then by typing the Train Symbol which for the Metra Southwest Service "SW", followed by train ID i.e., 802, and end with day of the month i.e., 11 (for example SW80211 note no spaces are in the symbol) and for Metra train that run at Lemoyne starts with M and the rest is the same as the Southwest service. For Amtrak trains start with "A" followed by the symbol and then day of month (ie A5511) and Tab key, the data that is captured by the Train Scheduling program will be updated. After checking and/or modifying the train symbol, you will press okay. See Figure 6 for where the Train Symbol is entered, followed by a Tab key, and when all data is validated then click on "OK". Now the train symbol can be used for the passenger train.

SYSTEM SUMMARY

Figure 4 System Summary with System Trains

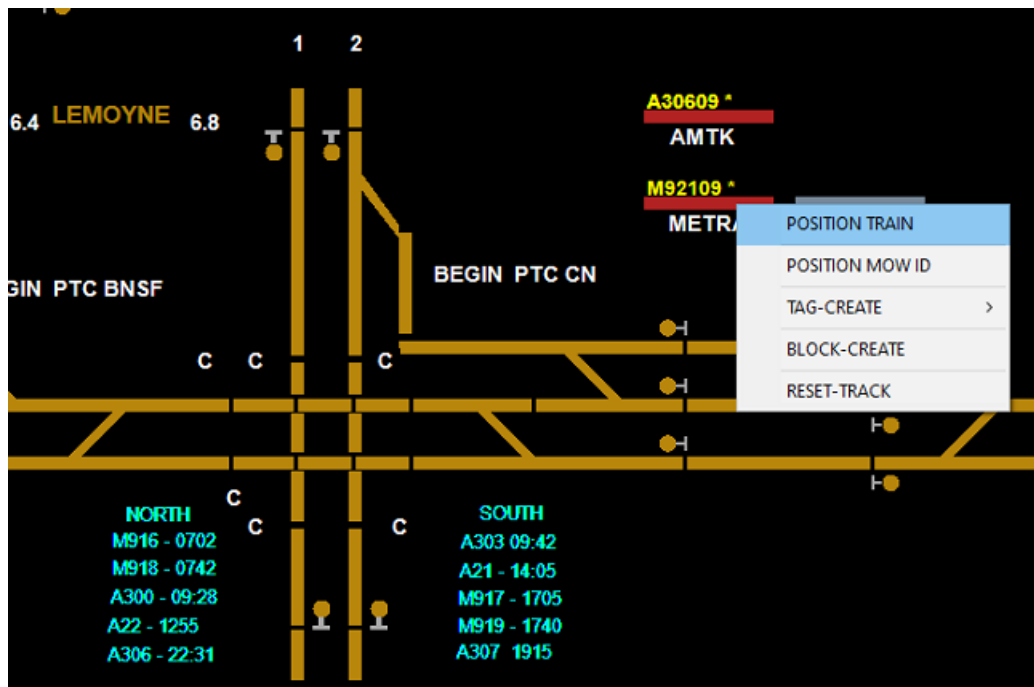

Figure 5 After right click on the track you want to position the Train Symbol.

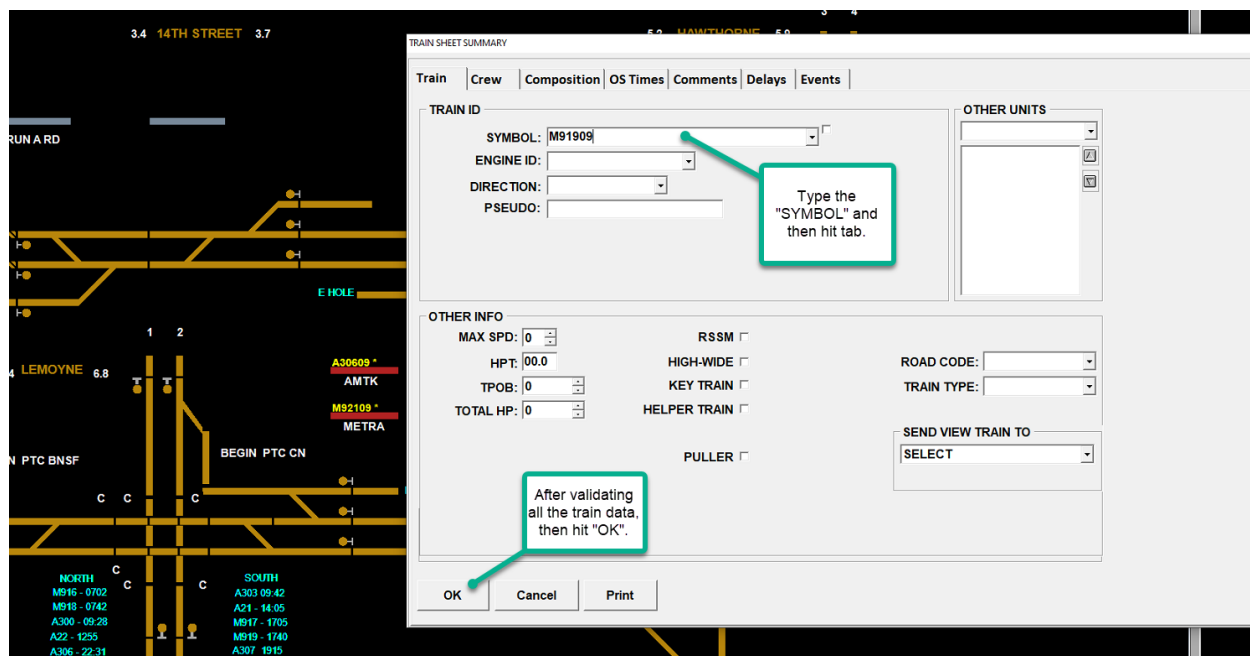

Figure 6 After choosing Position Train, this where you type the Train Symbol and then hit tab.

Once a train is released, the archive process will final the train. All exit track components in BRC territory are setup to release a Train ID when the train leaves the last dispatcher-controlled track, but there are times when they are left, and Train Dispatchers are required to release the Train ID when the train has completed its trip. See below Figure 10 on how to release a train ID that did not release at the end of trip, or the train did not run. If the train symbol is in the "System Summary" Tab "System Trains" and a Dispatcher wants to release, the Train Symbol will need to be Positioned, as described above and shown in Figures 4, 5, and 6, on the track line, either a shelf track and then Release as shown in Figure 10.

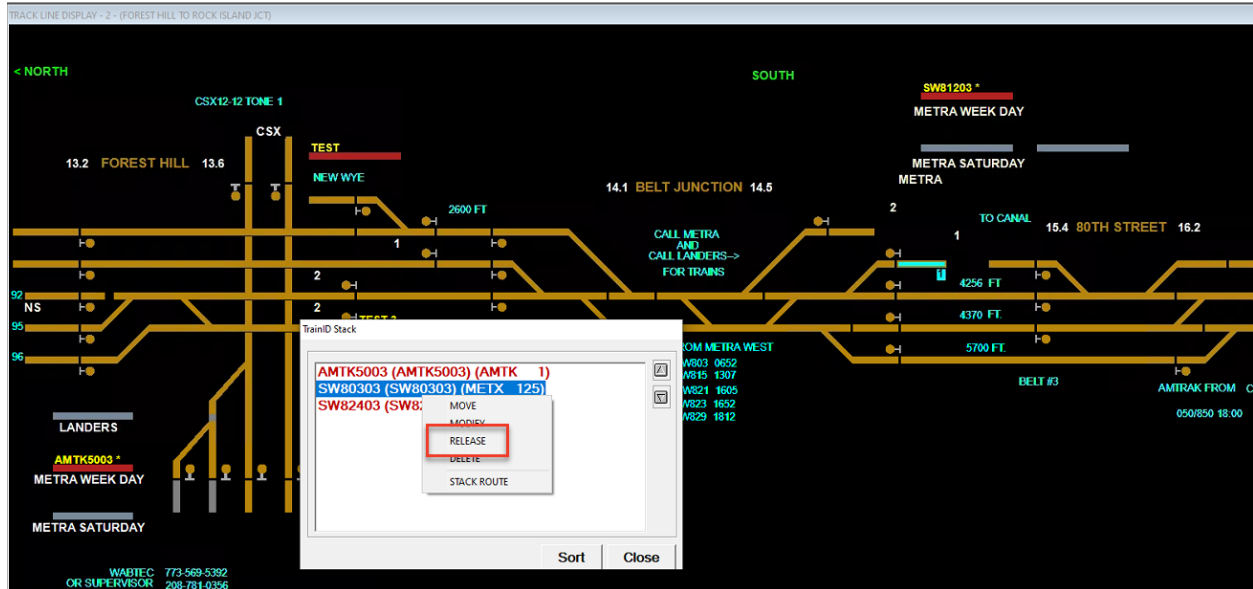

Figure 10 Release a Train Symbol from anywhere on the Track Line.

A new train schedule will be implemented on Sunday, July 11th for Monday's Metra's SouthWest service. See Figure 8 for the new schedule and the blue are the changes from the current schedule. At this time assignment of the DOB will be turned on.

Figure 9 Train Sheet modify by right click on Train Symbol.

SouthWest Service  
Alternate Schedule  
Effective 7/12/2021

The below pilot weekday schedule is effective July 12, 2021.  
Metra will announce schedule changes on metrail.com and through social media outlets.  
There is currently NO WEEKEND SERVICE on SouthWest Service.
